**Announcement to the Australian Stock Exchange
4th March 2010**

**Hodges Commences Drilling at Norr Döttern High
Grade Uranium Projects, Sweden.**

The directors of Hodges Resources Limited (ASX: HDG) ("Hodges" or "the Company") are pleased to announce that they have commenced drilling at Östra Järntjärnbäcken bedrock uranium prospect, located within the Norr Döttern Project area in the known Arvidsjaur-Arjeplog Uranium district of northern Sweden.

High grade uranium values around the Norr Döttern area were initially reported by the Swedish Geological Survey (SGU) and followed-up by Hodges during the last three years. In 2008, Hodges completed seven diamond core holes at the Östra Järntjärnbäcken prospect with the best results being 7m @ 0.12% U from 22m in drill hole JTB08002. Details of all the drilling were reported in the announcement to the ASX on the 23rd June 2008.

The winter drilling campaign will also test the higher priority targets at the Norr Döttern 2 prospect, identified during the summer field program. Bedrock sampling completed by the SGU in 1974 at the Norr Döttern 2 prospect area discovered a uranium mineralized zone that assayed up to 28.2% U₃O₈ over 0.2 metres with an average grade of 3.5% U₃O₈ over 3 metres width along the 5 metre long excavation. No drilling has been undertaken at this prospect.

Details of the proposed winter drill program were reported in the last quarterly report of 2009, reported to the ASX on the 29th January 2010.

Please contact either Mark Major should you have any queries on this announcement.
